With dual-antenna input, mosaic-H™ provides precise and reliable heading combined with centimeter-level RTK positioning. Dual antenna heading capabilities in such a small form factor opens the door to advanced automation and navigation performance in both static and dynamic states, with reduced power consumption. Dual antenna GNSS delivers heading & pitch or heading & roll angles, which are available immediately at start-up, helping initialize inertial sensors which rely on movement for their attitude measurements.

**KEY FEATURES**

- Dual antenna support for sub-degree heading & pitch or heading & roll angles
- All-in-view satellite tracking: multi-constellation, multi-frequency
- Best-in-class RTK performance
- **AIM+** industry-leading anti-jamming anti-spoofing technology
- Lowest power consumption on the market
- Standard mosaic footprint enables several application-specific solutions based on a single design

**BENEFITS**

**Reliable heading performance**

With dual-antenna input, mosaic-H™ provides precise, reliable and positioning independent heading combined with centimeter-level RTK. GNSS heading provides the best performance in both static and dynamic conditions removing the reliance on vehicle movement for INS initialization. It also provides an alternative to magnet-based heading sensors, which can be effected by metal.

**Designed for automated assembly**

The mosaic-H™ is a single module delivering high-accuracy heading and positioning without the need for any additional components. It is designed for high volume production on automated assembly lines. All interfaces, commands and data messages are fully documented. The RxTools software suite allows convenient receiver configuration, monitoring, data logging and analysis. Offline processing is easy via our GeoTagZ software and its SDK library for PPK (Post Processed Kinematic).
