Septentrio mosaic-T™ is a multi-band, multi-constellation GNSS timing receiver designed specifically for providing the highest security and availability for critical infrastructure and other applications where resilient timing is essential. Mosaic-T™ is a low power surface-mount module with a wide array of interfaces including a dedicated timing input for time and frequency synchronization. It offers superior availability by tracking all Global Navigation Satellite System constellations (GNSS) and their current and future signals. With unique built-in AIM+ technology for anti-jamming, anti-spoofing and interference mitigation, Septentrio offers a highly resilient and precise timing receiver in a very small form factor.

**KEY FEATURES**

- Accurate and resilient with dedicated timing features
- All-in-view satellite tracking: multi-constellation, multi-frequency
- Dedicated inputs for clock and frequency synchronisation
- OSNMA Support
- Highly secure against jamming and spoofing with AIM+ unique interference mitigation technology
- Industry-leading ultra-low power consumption
- Easy-to-integrate

**BENEFITS**

**Top performance without compromises**
The best of both worlds: small size with solid performance. Mosaic-T™ offers a high-precision solution for time and frequency synchronization under challenging conditions such as during GNSS jamming or spoofing. It offers unmatched resilience thanks to its all-constellation multi-frequency capabilities and AIM+ technology.

**More compact than ever**
Sized at only 31 x 31 x 4 mm and weighing no more than 7g, mosaic-T™ offers unparalleled size to performance ratio.

**Meant for automated assembly**
The mosaic-T™ module is designed for high volume automated assembly lines with minimal amount of additional components required. All interfaces, commands and data messages are fully documented. The complete RxTools software suite is also included with mosaic-T™. It enables quick and easy receiver configuration, data logging and analysis.

**Advanced technologies inside**
Septentrio’s GNSS+ toolset enables accuracy and reliability in the toughest conditions with:

- **AIM+** the most advanced on-board interference mitigation technology on the market (mitigating both narrow and wide band chirp jammers).
- **LOCK+** for robust tracking despite mechanical shocks and vibrations.
- **APME+** multipath mitigation to distinguish direct signals from those reflected off nearby structures.
- **IONO+** provides advanced protection against ionospheric disturbances.
